

Woodwise

Recycling offcuts to energy

A Carbon-neutral Renewable Energy Initiative

Woodwise provides Wood Fuel free of charge to local Schools and Community projects. Working in partnership with local businesses, local communities and local councils we collect and recycle timber offcuts, turning them into shredded wood chip fuel that is distributed free of charge to schools and community facilities equipped with biomass boilers.

Wood Fuel is 'carbon neutral', absorbing an equal amount of CO² whilst growing as is eventually released through combustion. Woodwise is taking advice from the Carbon Trust, Wood Energy and CARE Ltd to verify its research and initiatives, and to quantify the CO² savings achieved.

Each tonne of waste wood recycled into wood chip saves 0.54 tonnes of CO²

Woodwise have researched and funded this project with the ambition of furthering the recycling of wood offcuts from the construction industry into Renewable Energy in the form of wood fuel.

Woodwise collect untreated wood offcuts free of charge from Partners of the Project. The wood is returned to the Woodwise site at Harvey Shopfitters by using empty vehicles returning to the yard. This enables very low transportation costs and emissions.

Woodwise will:

- Collect wood offcuts free of charge from partners
- Convert wood offcuts into wood fuel for use in Biomass boilers
- Arrange distribution of the wood fuel
- Provide the wood fuel, free of charge, for use by local community facilities

Participation in the scheme requires only your active commitment to implement recycling practices in your business, using our specially designed wheelie bins to collect the waste wood.

We are looking for other like-minded businesses who wish to recycle their untreated wood offcuts into free-of-charge wood fuel to support schools and community facilities in and around Bristol, to help make Bristol and its surroundings a greener place to live.

If you have any questions please call the dedicated Woodwise phone line on 01179 582188
